It identifies and explains the vast number of published genealogical sources, acting both as a guidebook and a bibliography to the printed material in the field. The introduction alone is a treasure trove of information, and should be called Genealogy Sources 101. Coverage includes encyclopedias, gazetteers, indexes, abstracts, histories, biographies, military sources, periodicals, and much more. Appendixes include CD-ROMs for family historians, major genealogical libraries in the United States, and a list of genealogical publishers and booksellers. A Guide to Sources for the History of the Danish West Indies (U.S. Virgin Islands), 1671-1917-Erik Gøbel 2002 The Danish West Indies - the islands of St. Thomas, St. John, and St. Croix - were a traditional Caribbean colony, characterized by sugar production, trade, and shipping. The colony was under the Danish flag from 1671 until 1917, since which time the islands have been known as the United States Virgin Islands. The archival sources for the history of the three islands are first and foremost in the Danish National Archives. These records are exceptionally comprehensive and their research potential is enormously rich, as the Danes have been meticulous in documenting almost everything that happened in the colony and in preserving the records. The Danish archival sources are therefore unique historical resources today. This book is a thorough guide to the vast Danish West Indian material in Denmark.

Guide to Information Sources in Mathematics and Statistics-Martha A. Tucker 2004-09-30 This book is a reference for librarians, mathematicians, and statisticians involved in college and research level mathematics and statistics in the 21st century. We are in a time of transition in scholarly communications in mathematics, practices which have changed little for a hundred years are giving way to new modes of accessing information. Where journals, books, indexes and catalogs were once the physical representation of a good mathematics library, shelves have given way to computers, and users are often accessing information from remote places. Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics. Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics. These are grouped by type of material. Publication dates range from the 1800’s onwards. Hundreds of electronic resources—some online, both dynamic and static, some in fixed media, are listed among the paper resources. Amazingly a majority of listed electronic resources are free.

Irish Gravestone Inscriptions—William O’Kane 1999 Heritage World of County Tyrone, Northern Ireland, has surveyed the gravestone inscriptions for almost 900 cemeteries across the northern part of Ireland. The great majority of these cemeteries are located in Northern Ireland, although the figure includes a substantial number from two other Ulster counties, Donegal and Monaghan, as well as several from County Louth. The survey encompasses cemeteries of all religious denominations as well as those administered by local district and borough councils. In each case, there is an exact transcript of all gravestone inscriptions, together with a simple plan of the cemetery. Information pertaining to these cemeteries can be acquired from Heritage World either as an index, giving county, parish, person, cemetery name, date of death, and denomination, or as a full gravestone inscription. These details can be supplied for any name in a particular cemetery, parish, or county. This book lists all cemeteries surveyed to date by Heritage World. Arranged by county, all 900 cemeteries are listed by the civil parish in which they are located, together with their religious denomination. In brief, then, this is a guide to the 900 cemeteries surveyed in the nine counties of Antrim, Armagh, Derry, Donegal, Down, Fermanagh, Louth, Monaghan, and Tyrone, with pointers for the researcher to follow for acquiring full details of individual gravestone inscriptions.

Research Using Secondary Sources-Samantha Warren 2014-10-31 Why write a dissertation using secondary sources only? A growing number of universities are making this a necessity, by means of controlling administration, so the decision could be made for you. But there are a number of reasons why collating from secondary sources might be preferable to creating your own. We live in an age where media and the Internet make an abundant source of material that may be interrogated
unobtrusively by researchers. Secondly, gathering empirical research is complex and challenging, and not a skill set that you're likely to use in a future management career—unlike desk based research, of material already available to you. While methodology textbooks mention secondary sources, the assumption is that the research is quantitative and statistical. No textbook has gone beyond this, until now. This much-needed book is a start-to-finish guide to every step of your project, from inspiring ideas to crafting conclusions, all from work already in the public domain, and in a conversational, humorous and even inspiring way. Each chapter starts with a "Why Read This?" box to summarise how what you are about to learn will make your life easier and how it relates to other chapters. Each method or stage explained includes examples of real student projects, with student commentary on the highs and lows. Each chapter includes vignettes from published research articles, as well as "Now What" boxes and "Try It Out" exercises to help you think through every stage of your project.

Divided into two parts, the book begins by considering approaches that can be taken towards the study of Russian history using primary sources. It then moves on to assess both textual and visual sources, including memoirs, autobiographies, journals, newspapers, art, maps, film and TV, enabling the reader to engage with and make sense of the burgeoning number of different sources and the ways they are used. Contributors illuminate key issues in the study of different areas of Russia’s history through their analysis of source materials, exploring some of the major issues in using different source types and reflecting recent discoveries that are changing the field.
